Confirmation

I herewith confirm that Bacoban (alcohol based) has a direct and lasting efficacy against different Influenza viruses including H3N8, H5N1 and H1N1. This efficacy could be demonstrated in different tests made by the MikroLab GmbH, Norderogg 2 in 28259 Bremen a DVV certified laboratory. Also Bacoban WB has a direct Influenza virus inactivating capacity. Because of the same ingredient it could be clearly assume that Bacoban WB show the same lasting efficacy against these viruses, if the concentration is not lower than 1%.

Dr. med. Rainer G. Hanselmann
